Rafail Jabbarov

Victoria, BC | jabbarovrafail@gmail.com | github.com/GoldenAkm | linkedin.com/in/rafail-jabbarov

Technical Skills

Engineering Tools: KiCad (Engineering Drawings & Wiring Diagrams), Oscilloscopes, Power Supplies, Soldering.
Software & Programming: MS Office Suite (Advanced Excel, Word, PowerPoint, Outlook), Python, C/C++, MicroPython, SQL.
Core Competencies: Multidisciplinary Project Support, Hardware/Software Integration, Technical Documentation, Fast-Paced Problem Solving.

Engineering Projects

Embedded Systems Prototype & Wiring Diagrams | *MicroPython, KiCad, Hardware Testing* July 2026

- Developed and interpreted complex engineering drawings and wiring diagrams in KiCad to design a custom two-layer 100mm x 60mm printed circuit board.
- Assisted in multidisciplinary project execution by integrating a Raspberry Pi Pico W, analog audio amplifiers, and digital displays into a cohesive embedded system.
- Authored a 30-page technical design report using MS Word and Excel to document system architecture, testing parameters, and wiring schematics.

Automated Test Ecosystem & Data Parsing | *Python, MS Excel, SQL* April 2026

- Engineered a robust Python script to automate the parsing of massive system execution logs, extracting structured data from raw outputs to support large capital project tracking.
- Utilized MS Excel and SQL to organize, analyze, and present defect resolution data so project milestones were met on schedule.

Digital Signal Processing & Hardware Validation | *Oscilloscopes, Python* March 2026

- Utilized laboratory oscilloscopes to measure high-speed clock signals and isolate signal degradation in complex hardware circuits.
- Applied Python programming to build statistical models that filtered physical anomalies from raw sensor inputs, executing rigorous electrical validation methodologies.

Professional Experience

System Administrator (Distributed IT Infrastructure) Victoria, BC
University of Victoria *Aug 2023 – Aug 2025*

- Engineered automated process enhancements using Python and Bash scripting to streamline server resource allocation and reduce manual data entry.
- Managed AWS cloud hosting environments to support large-scale events, configuring Linux-based architectures to ensure 99.9% system uptime and secure data routing.
- Demonstrated strong communication skills by collaborating with multidisciplinary university teams to coordinate continuous digital infrastructure improvements.

Help Desk Support Analyst Baku, Azerbaijan
Network Training Centre *May 2023 – Aug 2023*

- Interfaced directly with users to troubleshoot hardware failures and network connectivity issues, utilizing excellent communication and problem-solving abilities.
- Developed documentation for new and existing work processes, accurately recording procedural solutions to improve future IT incident response times.

Education

University of Victoria Victoria, BC
Bachelor of Engineering in Computer Engineering (BEng) *Expected May 2028*

- **Status:** Completed minimum of 2nd year of accredited engineering degree studies.
- **Coursework:** Advanced Digital Systems, Embedded Systems, Digital Signal Processing, Data Structures.
